## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-16, drawn to an electrodes connection structure of an LCD device, classified in class 349, subclass 149.
  - II. Claims 17-20, drawn to a method for manufacturing an LCD, classified in class 349, subclass 187.
2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the photolithography process to form gate electrode, gate line and gate terminal, and to form an opening, and to form pixel electrode and bonding pad that is the process also can be used to make other and materially different LCD device.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

3. If Applicant elected the product claims 1-16, then a further election of one of the species is required.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Art Unit: 2871

1) a protective layer formed corresponding to the contact region of each of the terminals; and a plurality of first pad formed on the protective layer; [claims 1-13];

2) a protective layer formed from a first region to second region; and a plurality of pads formed on the protective layer having opening; [claims 14; Note: recitation "...a protective layer formed from a first region to a second region between the first substrate and having an opening. . ." that it is unclear as "between the first substrate" in which it is impossible something between only one substrate. Correction is required.];

3) each pad contacts a corresponding terminal through a pad contact hole formed on the protective layer;[claim 15]

4) data driving IC chip is bump-bonded to data pads at the first peripheral region by a COG method; and gate driving IC chip bonded to gate pads at the second peripheral region by a COF method; and without using protective layer; [claim 16].

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no generic claims were identified.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 2871

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mike Qi whose telephone number is (571) 272-2299. The examiner can normally be reached on M-T 8:00 am-5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (571) 272-2293. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
